

BEECHWORTH  WINDOWS™

# The Slider Window

### CONFIDENCE in fiberglass technology

### A SIMPLIFIED process for the right fit

### PRIDE in beautiful windows

1 Single slide operation with horizontal sliding: smoothly, easily and quietly

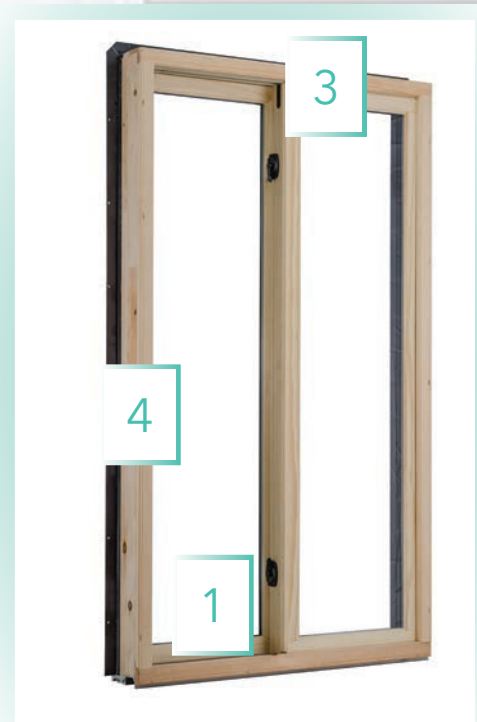

2 A fiberglass cover on the sill-track provides a better visual with the benefit of a uniform finish from the exterior view

3 A tilt latch system allows for easy opening, closing and cleaning

4 Historical features present a more traditional aesthetic: proportions, details and depth

5 Weather stripping is placed exactly where it's needed, along sash and jamb liner

6 A compression interlock system secures the sash into the frame for water and air infiltration resistance

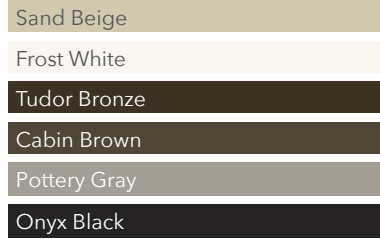

See the slider window video overview on the Beechworth Windows YouTube channel.

EXTERIOR OPTIONS

Finish options

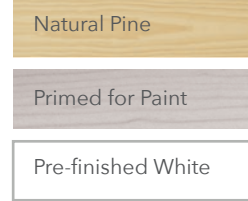

Finishes resist fading, cracking, and chipping.

Finishes are lab tested via ASTM fade and impact standards. Beechworth finishes continuously exceed industry standards.

INTERIOR OPTIONS

Finish options

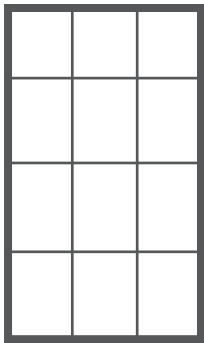

Interiors and SDLs are made of real pine.

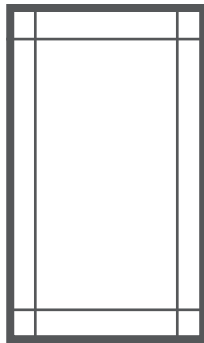

Substantial wood interiors add traditional detail and character, for views filled with warmth from any angle.

GRILLE PATTERN OPTIONS

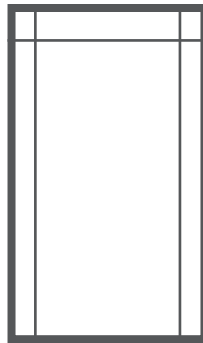

Colonial

9-lite

6-lite

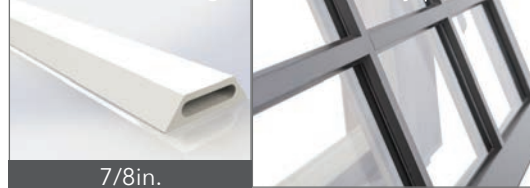

Grilles add unique style to some or all of your windows. They will match selected interior / exterior finishes.

GRILLE OPTIONS

SDLs (*outside of glass*)

Exterior fiberglass SDL in Putty profile

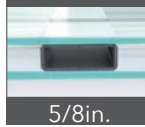

Interior wood SDL in Stepped profile

GBGs (*inside glass*)

Flat

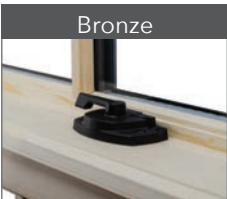

Sculptured

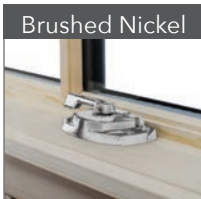

Removeable wood grilles also available.

HARDWARE OPTIONS

Bronze

Brushed Nickel

White

Tan

Select your premium hardware based on interior preference: pre-finished white, stained or primed for paint.

HIGH VISIBILITY SCREEN

Full-size, high visibility screen reaches the full length of the window so both sash open simultaneously, without compromising the view.

Your windows are made to **custom fit** to the 1/4in. increment. Max 72in.x72in. Min 21.25in.x15.75in.

## GLASS PACKAGES: EVALUATE YOUR OPTIONS

First, understand what can cause discomfort and increase costs for temperature control.

**Radiation:** solar energy that heats up a room through radiation

**Conduction:** passing of heat or cold through the materials

**Convection:** movement of air inside the home due to differences between inside and outside temperatures

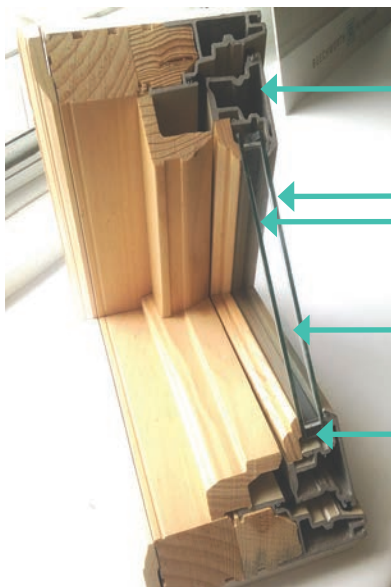

All Beechworth Windows glass packages come with dual pane glass, Argon gas, and low-e coatings to help address the common issues related to high energy bills.

	STANDARD	ADVANCED	MAX	
<b>Low-E Coatings</b>	2 soft (resistance to heat lost through radiation)	3 soft (added resistance)	3 soft, 1 hard (extreme resistance)	Coatings reduce the movement of heat energy to inside of the home
<b>Includes Argon Gas</b>	Yes	Yes	Yes	Reduces the movement of heat due to differences in interior and exterior temperatures
<b>Visible Light</b>	High	Medium	Medium	Lower visible transmission indicates that less light will transfer through
<b>U-Factor</b>	Low	Lower	Lowest	U-Factor is the measure of the flow of heat through a window. The lower the U-Factor, the better the insulation
<b>Condensation</b>	Lower	Lower	Low	Indicates possibility of condensation

\*All advanced and max glass options are energy star rated. Please contact your representative for more details.

## BEECHWORTH ADDRESSES RADIATION, CONVECTION, CONDUCTION

Extremely thermally efficient frame material, which helps reduce heat and cold conduction

Two panes of glass, with 2-4 layers of low-e coatings to reduce incoming solar radiation

Argon gas between the panes to reduce the movement of air (and that feeling of "drafty windows")

Warm edge spacer reduces heat transfer through the window and supports the glass panes
